- ISBN: 9781568814438
- Publisher: AK Peters

Review Not since Lewis Carroll wrote about logic has an expert produced a textbook on logic so saturated with delightful problems, paradoxes, jokes, and philosophical implications as Professor Smullyan's Logical Labyrinths. Opening with a superb assortment of his famous logic puzzles, Ray moves sure-footed through higher-order logics to the paradise of Cantor's alephs and Gödel's undecidables. If you've ever wondered why in first-order logic the statement All unicorns have five legs is assumed true, Smullyan will make it all clear. It's a volume only Ray could have written, and it will be used in college classrooms for a long time to come. --Martin Gardner, author of Mathematical Games This book overflows with wit and wisdom from a master of puzzles and paradox. I wish all my students had worked through this text. Suitable for self study, the book will be most valuable if the readers agree not to peek at the solutions before learning to think for themselves. --Dana S. Scott, Berkeley, California About the Author Raymond M. Smullyan is a highly-regarded research mathematician and a successful author with numerous popular books on logic puzzles, as well as more technical works on logic. In addition, he is a magician, close friend of Martin Gardner, and a very popular figure in the international puzzle community.
